Insights

This report is the comprehensive view of verbal cues, nonverbal communication cues and sentiment analysis for statements, which have been examined for various levels of intensity to gauge appropriate responses. This report is generated based on the candidate's response during the interview. All the captured answers are taken into consideration and processed through the Emotional Wheel, which provides a snapshot of how they feel during the interview and creates content based on its analysis. This report is the comprehensive view of the analysis of contents of statements, verbal cues, and nonverbal communication.

Figure: This figure represents the general common feelings which were felt by the candidate during the interview. Below, these emotions have been broken down to more focused emotion.

Section 2

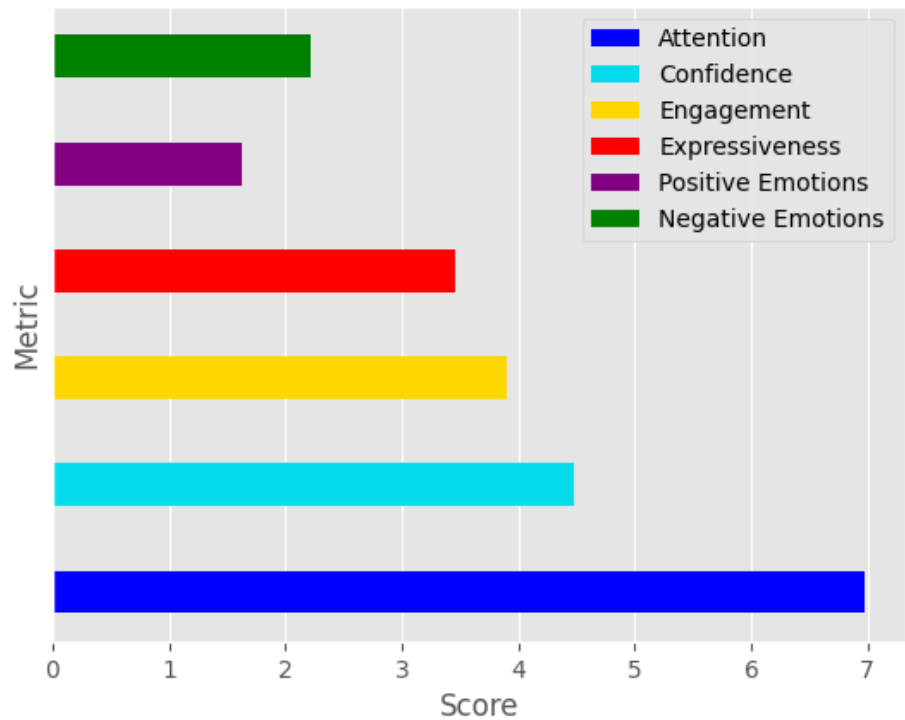

Non Verbal Analysis

Figure: This infographic represents the important nonverbal metrics which are captured based on the video of the candidate.

The Non Verbal Analysis section of the assessment involves many metrics that are captured through a candidate's facial movements. Our technology scientifically measures and reports your emotions with sophisticated computer vision and machine learning techniques. The metrics are broken down into seven emotions: anger, anticipation, disgust, fear and surprise; 20 facial expressions (eyebrows up or eyebrows raised); 13 emojis for happiness/joy/amusement to sadness/disgust to thrill seeking; four appearances.

Non Verbal Analysis

Section 3

Remarks: Below are the remarks for all important metrics that were collected.

Attention

Good

The by and large concentration of the candidate has been exceptionally great. Candidate showcased excellent attention skills.

Confidence

Good

The candidate appears beyond any doubt that most of the answers given by him/her are correct and has showcased great confidence.

Engagement

Good

The candidate has appeared to have great engagement aptitudes. The approach to replying to the questions was exceptionally well.

Expressiveness

Good

The candidate has showcased an exceptionally great level of expressiveness amid the interview. The quality of effectively conveying a thought or feeling was seen throughout the interview.

Positive Emotions

Medium

The positive emotions captured during the interview fits within the normal spectrum.

Negative Emotions

Low

The negative emotions shown are less which is good. The lesser negative emotions the better it is.

Section 4

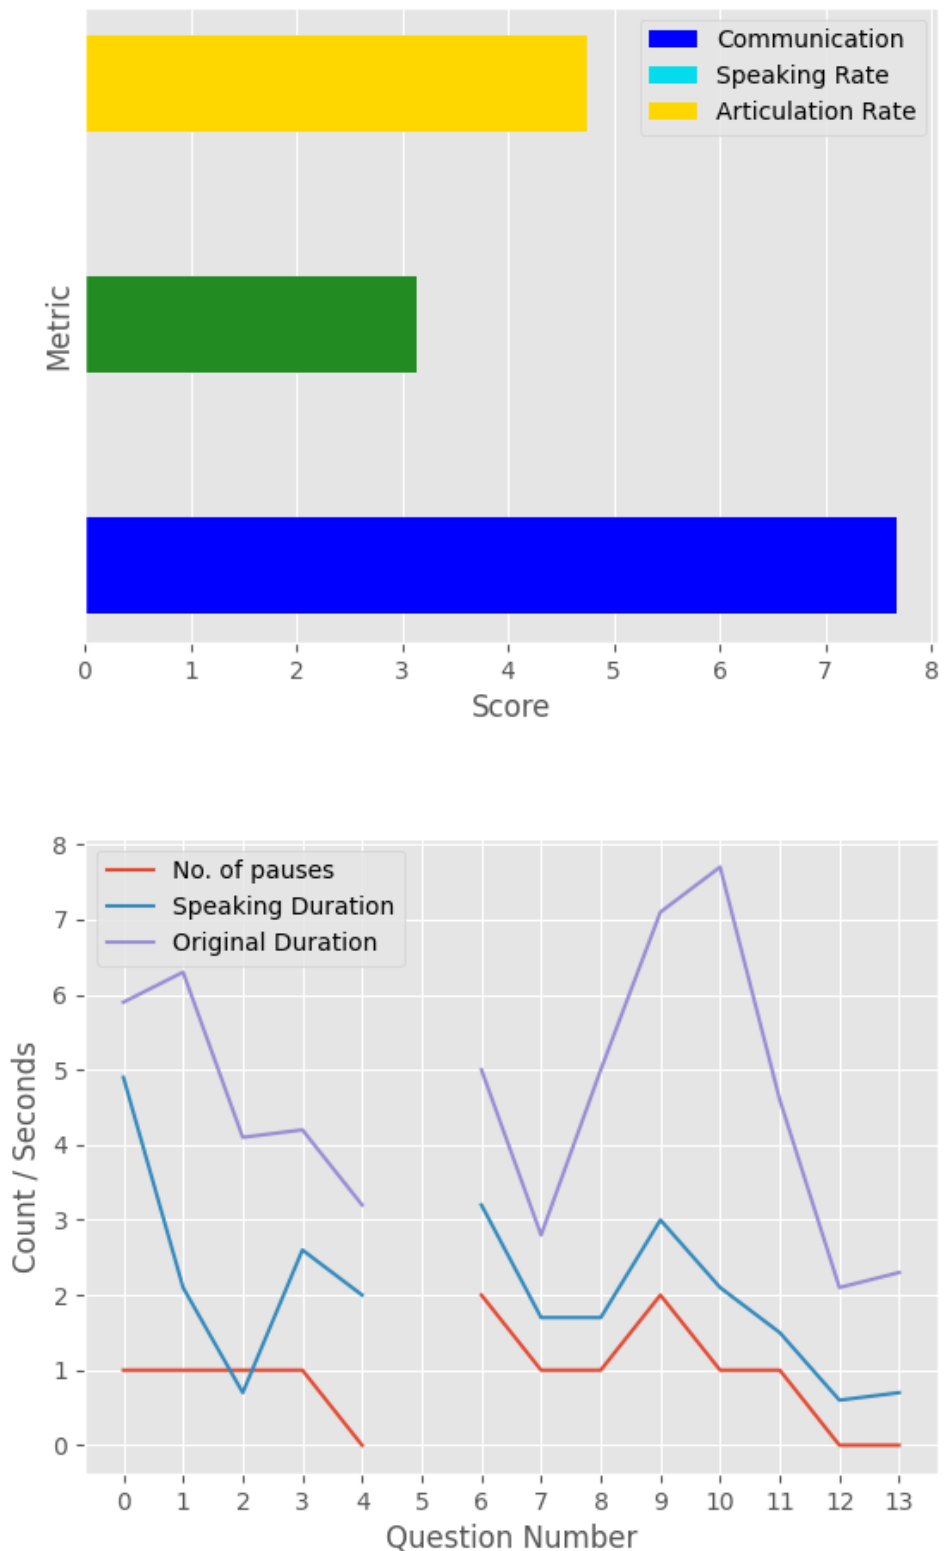

Verbal Analysis

Figure: This infographic represents the important verbal metrics which are captured based on the audio of the candidate

The Verbal Analysis section of the assessment involves capturing and analyzing the audio part of the candidate's interview. The metrics provide insight into how well this individual communicates with others in their interview, as well as any other factors related to communication such as speech rate, articulation rates etc. The candidate is then evaluated on these verbal qualities by being given scores for each metric they are judged against. Speech Rate measures words per minute while Articulation Rates measure syllables spoken per word.

Verbal Analysis

Section 5

Remarks: Below are the remarks for all important metrics that were collected.

Communication

Average

The communication of the candidate during the interview was found to be normal.

Speaking Rate

Good

The candidate has shown a very good speaking rate

Articulation Rate

Good

High articulation rate signifies better framed sentences.

No. of pauses

Medium

The number of pauses used by the candidate were fair.

Section 6

Sentiment Analysis

Sentiment analysis is the process of assigning a metric to the responses of the candidates. It is achieved by using thresholds, which break answers into defined buckets: positive, negative or neutral. There are 11 general emotions (positive and negative), but 82 mini-emotions under those two categories as well as 159 micro-emotions below them which present the result.

Sentiment Analysis of Responses

Figure: This table represents the questions asked during the interview and the most accurate sentiment assessed by our system to the micro level.

QUESTION ASKED	CANDIDATE RESPONSE
Tell us something interesting about yourself.	Worried Stressed Confused
